

## **Project 3: Cleaning and Skeletons in Diva**

Due Date: Wednesday, May 29

Create a cleaning script to fill gaps and filter your data in Diva. You will need to modify the marker file for use in Diva and create a selection set for your marker file. Create skeletons for one of the takes (either your t-pose or moto pose probably whichever is easiest to adjust the default skeleton to). Create a seed script that will automatically create skeletons for all your other takes. You can then batch process your other takes with the cleaning and seed script.
